

### ~Entities and its Attributes

1. Library Staff (strong) :|person|
  - LibID <pri>
  - name
  - age
  - address
  - phone
  - email
  - degree\*
  - timings( day{name of days}, startTime, stopTime)
  - wages [derived]
  - efficiency [derived]
2. LOG (strong) :|place|
  - logTime <pri>
  - LibID
  - leaveTime
  - hoursWorked [derived]
3. Membership (strong) :|event|
  - AadharNo < pri>
  - Image
  - date
  - LibID
  - MemID
  - checkIDBanned\*
4. Plans (strong) :|concept|
  - planID <pri>
  - type
  - initialPayment
  - issueCharge
  - penalyCharge( charge, NODays)
  - NoMems [derived]
5. Members (strong) :|person|
  - MemID <pri>
  - Name
  - Addr
  - Phone
  - Email
  - PlanID
  - Dues [Derived]
  - {BooksID-inPoss}

#### ~Relationships and Constraints:

1. Manages <unary>
  - One-to-Many
  - (e) LibraryStaff
  - Desc.Attr-> assignDt
2. signInOut <binary>
  - One-to-One
  - (e) LibraryStaff {partial}
  - (e) LOG {total}
3. Provides <binary>
  - One-to-Many
  - (e) LibraryStaff {partial}
  - (e) Membership {total}
4. Offered <binary>
  - One-to-Many
  - (e) Plans {partial}
  - (e) Membership {total}
5. plansUpdate <ternary>
  - One-to-Many
  - (e) Plans {partial}
  - (e) LibraryStaff {partial}
  - (e) Members {total}
  - Desc.Attr-> date
6. Borrowing <binary>
  - (e) Members(0,5)
  - (e) Issues(1,1)
7. Returning <binary>
  - One-to-Many
  - (e) Members {partial}
  - (e) Returns {partial}

8. calcFine <binary> <<Identifying>>
  - One-to-One
  - (e) Returns {partial}
  - (e) FineGen {total}
9. Search <binary>
  - Many-to-Many
  - (e)Members
  - (e)Texts
  - Desc.Attr-> reportID
10. Update <binary>
  - Many-to-Many
  - (e)Texts {total}
  - (e) LibraryStaff {partial}
11. Order <ternary>
  - One-to-Many
  - (e) LibraryStaff {partial}
  - (e) vendors {partial}
  - (e) orderDetails {total}
12. Maintains <binary>
  - One-to-Many
  - (e) LibraryStaff
  - (e) AccountTransactions

#### Problem Statement:

The library management database keeps track of **library staffs**, **members**, **books**, and other various units of library. One of the **library staff** is assigned to *manage* other staffs. **Staff's** *shift* or work timings are recorded in the **log** DB. Library Staffs have various jobs. *Providing* new **membership** to numerous people is one of the important job. Every **membership** is completed by *choosing* a member **plan**. This **plan** can later be *updated* by the **members** under the consent of any **library staff**.

**Members** have facility to *search* through diverse collection of **texts**, which consists of all categories of books, articles, magazines, newspaper, etc. **Members** can perform various **transactions** like *borrowing* and *returning* of issuable **texts**. A **member** can have atmost 5 books in possession, which are **issued** from the library. **Fine** is *calculated* on every **return** of book and its amount is dependent on member's **plan**. Only **library staffs** have permission to *update* the records of the **texts**. These **texts** are usually *ordered* from selected **vendors**. **Staffs** also *maintains* overall monetary **transactions**-track all **expenses** and **incomes** (fundings and other credits).
